

## Picture this - Task sheet

### Task:

Your task is to take a picture using either an iPad or camera. You will need to upload the image onto the computer and save it into your personal ICT challenge folder. Using the Photoshop computer software upload the image. Choose five different filters or effects to use to improve the image. Once you have used the five filters you will need to save the edited image. Save the edited image in the same document as the original image so that you can directly see the differences between the two. The final document saved into your personal ICT challenge folder will have both the original and edited images next to each other. Once you have finished this ICT challenge log into the picture this today's meet chat room and share one thing you learnt, one challenge you had and how you overcame that challenge.

### Process:

1. Using an iPad or a camera take a picture of your liking.
2. Upload the image onto the computer and save it into your personal ICT challenge folder.
3. Open the Photoshop software on your computer and upload the image.
4. Explore each of the filters and effects that you can use on your image in Photoshop.
5. Use 5 filters or effects on the image you have uploaded.
6. Save both the original image and edited image side by side in one document – save in personal

ICT challenge folder under picture this challenge.

7. Log into the picture this todays meet chat room and share one thing you learnt, one challenge you had and how you overcame that challenge.

**Teacher tip:**

The Photoshop website has easy to follow videos on how to use different filters and effects on images. Remember classroom netiquette rules apply when communicating within the todays meet chat rooms.
